March 3:

Bruce Aylward, World Health Organization [Joint Mission to China](https://www.who.int/docs/default-source/coronaviruse/who-china-joint-mission-on-covid-19-final-report.pdf) (<https://www.who.int/docs/default-source/coronaviruse/who-china-joint-mission-on-covid-19-final-report.pdf>):

"I think the key learning from China is speed — **it's all about the speed**. The **faster you can find the cases, isolate the cases, and track their close contacts**, the more successful you're going to be. [...]

People keep saying [the cases are the] tip of the iceberg. But we couldn't find that. We found there's a lot of people who are cases, a lot of close contacts — but **not a lot of asymptomatic circulation** of this virus in the bigger population. And **that's different from flu**. [...]

China got patients in treatment early and have highly **sophisticated health care** treatment procedures. **They are really good at keeping people alive with this disease.** They have a **survival rate** (with a mortality rate of just under 1% outside of Hubei province) for this disease **I would not extrapolate to the rest of the world.** What you've seen in **Italy and Iran is that a lot of people are dying.**

Panic and hysteria are not appropriate. This is a **disease that is in the cases and their close contacts.** It's **not a hidden enemy lurking behind bushes.** Get organized, get educated, and get working."
